FREE POSTER

How We Use Ozobot

Eight classroom rules. Hang the poster where students work with the robots.

1. **Handle the robot carefully.** Hold it by the sides and don't drop it.
2. **Keep the robot on the table.** Place your route in the middle of the table, away from the edge.
3. **Calibrate first.** Place the robot on the black circle before you start. This helps it read better.
4. **Draw neatly.** Draw thick, even lines. Put the cap back on the marker when you're done.
5. **Work together and take turns.** One person controls the robot while the other watches. Then switch.
6. **Try again.** Not working? See what happens, change one thing, and test again.
7. **Ask a classmate first.** If you can't figure it out together, ask your teacher.
8. **Clean up together.** Turn off the robot and put it back in its place, along with the markers.

It's okay to make mistakes
This is how you learn to code: try, observe, improve.
